This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. PREFACE.

Progress in the development of material resources, in recent years, has created a large and increasing volume of engineering literature in periodicals which contain valuable papers and information, much of which is too recent, or fragmentary in character, to be found in books, or elsewhere.

This work is designed to make accessible to engineers in all branches of the profession, to special investigators, librarians, editors and others, the more important papers and articles contained in leading American and English periodicals during the last five years. To keep the list from becoming unwieldy, it was decided to limit, besides the period covered, the number of references to about ten thousand, and, with these restrictions, the compiler has selected each reference given by personal examination of the articles in the files, and has been enabled to include quite complete references to the periodicals named. He regrets that the prescribed limits do not enable him to also include the Proceedings of the Engineering Societies, and other valuable periodicals, in the present volume.

The index is by subjects, alphabetically arranged, and makes available information now practically buried in the mass of engineering literature, or only to be extracted by the aid of some one hundred and fifty different indices, and the loss of much time.

ENGINEERING INDEX.

NOTE.—The black faced figures refer to the years, as-**3**,=1883. Where no figure is given after date of month, the reference is in the year indicated by the next succeeding heavy face figure. When name of periodical is omitted before date of month the last preceding name is understood.

The mark "do." in every case, refers to the first word or subject only, in the reference immediately preceding; thus, under the word, ELECTRIC "welding, E. Thomson, *Soc. Arts*, Dec. 9.-**6**; do. *Eng.* Sep. 24" &c., the do. refers to welding only. When two such marks are used together, it indicates either the same subject and author, or that the first and second subjects, or more, of preceding reference are repeated.

When the same figures are repeated, in dates of months, as "St. Albans water wks., Aug. 17, 24, 24;" the article is to be looked for in two or more places, in the number of periodical of that date.

ENGINEERING NEWS

AND

American RAILWAY Journal

Now Publishes a **SERIES OF FINELY EXECUTED COLORED MAPS** of the

Progress and Prospects of Railway Construction,

Exhibiting the condition of **American Railway Construction** in a clearer and more comprehensive manner than has ever before been attempted. These maps are issued at frequent intervals, and show in black, **ALL** the railway lines included in their area, and in red: (1) Track laid since January 1st of the current year. (2) Lines under contract or construction. (3) Lines under survey. (4) Projected lines of some promise.

On all technical questions connected with railroad construction and maintenance, ENGINEERING NEWS is now believed to be the most read, the most influential, and the most respected authority. Its weekly **CONSTRUCTION NEWS** is carefully edited, and its **correctness** made a special feature. A continuous record is kept of each separate work in the United States.
